

NON-ALLOWABLE PRODUCTS INCLUDE BUT ARE NOT LIMITED TO:

PRODUCTS CAN NEVER EVER BE USED.

GROWTH PROMOTING HORMONES / STEROIDS

Compudose	Encore	Revalor	Melengestrol Acetate (MGA, Heifermax)
Component	Lutalyse Synovex Beta-agonist (Optiflexx, others)		
Dexamethasone	Ralgro	Estro Plan	

ANTIBIOTICS (ORAL OR INJECTABLE OR AS FED IN SUPPLEMENTS)

A180	Draxxin	Micotil	Resflor
AS700	Excede	Naxcel	Spectinomycin
Auremycin	Excenel	Neomycin	Sulfas (Albon, Sustain)
Baytril	Callimycin	Nuflor	Tetradure
Biomycin	Gentocin	Oxytetracycline	Chloretetracycline
Tylan	LA200	Penicillin	Hexasol

IONOPHORES

Bovatec	Cattylst	Gain-ProRumensin	V-Max
---------	----------	------------------	-------

Feedstuffs/ Ingredients

Feather Meal	Fish Oil	Poultry Litter
Milk Replacers	Tallow	Yellow Grease

Any by-product from birds, fish, or mammals including cattle, swine, sheep, goats, or poultry.

ALLOWED HEALTH PRODUCTS AND PROTOCOLS FOR USE WHEN RAISING NATURAL CATTLE ARE:

Vaccines (ex: IBR, BRSV, BVD, PI3, Lepto, Pasteurella, Haemophilus, Clostridials, Mycoplasma)

This list does not represent an all-inclusive list of non-allowable products. Producers should contact their Veterinarian or Nutrition /Supplement Supplier for verification of other products.

COMPLIANT RANCH GUIDELINES

1. Tag calves at birth with Individual Ranch Tag and record birth date.
2. Tag calves with BEEFTRAXX PVP compliant program tag once approved after on-site audit.
3. Maintain birth records for a minimum of three years.
4. Calves must be born and raised on the original ranch of origin.
5. Identify or remove from group any calf treated with non-allowable products; antibiotics, growth promoting hormones, steroids, ionophores, or feed products; Record the tag number and/or any other identification that will be used to positively identify the non-conforming animal. Notching the calf's tag and / or applying an additional visual tag denoting treatment is recommended.
6. Examine mineral supplement ingredient tag for non-allowable products (CTC Bovatec, etc.) and any animal derived by-products.
7. Bio-Mos has been used to control calf scours. If used, add to the mineral and feed prior to calving. Consult your veterinarian or mineral supplier prior to using.
8. Maintain your herd with a high-quality vitamin and mineral program for your operation to boost efficacy of vaccinations and promote immunity for good health.
9. Biological vaccines (IBR, BVD, PI3, and BRSV) are allowed and high recommended. Modified Live vaccines are allowed/recommended, consult your veterinarian prior to use.
10. Clostridial 7 Way vaccines are allowed and recommended (esp. 2 ml products)
11. All preventative vaccines are allowed (Pasteurella, leptospirosis, etc.)
12. De-wormers and pour-on's are allowed for parasite control.
13. Deccox and Amprolium are allowed as treatment for coccidiosis with written prescription from a Veterinarian.
14. Ideal vaccination timeline: first round at branding and prior to breeding; Second round 2-4 weeks prior to weaning and third round 2-3 weeks after weaning.
15. Wean Calves 45-60 days prior to shipping.
16. Follow BQA guidelines and place all shots in the neck. Use Sub-Q application whenever possible and per label instructions. Use manufacturer and veterinarian recommendations.
17. Always maintain vaccine at manufacture's recommended temperature; coolers and ice packs to keep product cool and out of sun is recommended.
18. Always maintain control of needles; inspect needles and syringe after each injection; discard bent, hook end or dirty needles. Dispose of medical equipment with bio methods.
19. Calves which are non-conforming must be positively identified, sorted off and shipped separate.
20. Calves without proper identification will be disqualified from the program.
